

Banner Care and Storage for Vinyl Banners

Here are a few helpful hints for the long-term care of your vinyl banner:

1. Clean lightly with water and/or mild detergent or hand soap. Dry the banner thoroughly with a clean soft cloth or a rag.
2. Roll up your banner on a tube with the image facing the inside for digitally printed banners and outside for vinyl cut banners. Do not fold the banner; folding the banner can leave creases on the folds.
3. Store the banner in a cool and dry place. Keep out of direct sun, away from heating vents. Also, avoid prolonged exposure to heat (car trunk, storage building, etc.).

To remove creases from the banner:

1. Place the banner on a flat surface.
2. Heat up a clothes iron to cotton setting.
3. Get a cotton towel and wet it thoroughly.
4. Apply the wet towel on the crease and place the hot iron over the wet towel. This will cause steaming to help reduce or remove the creases on the banner. **CAUTION:** Do not put direct contact of the iron on the banner, direct contact will permanently damage the banner.
5. Creases can also be removed by heating the surface with a hair dryer or laying it flat under the sun.

Note: Test one of the above methods on an in-conspicuous place before you try this on the banner itself. The above info is a guidelines only, Digital Signage, Inc. is not responsible for any damage due to improper use.
